Regenerative Medicine

Helping Your
Body Heal, Naturally

www.NeuPath.com

What Is Regenerative Medicine?

Regenerative medicine focuses on repairing, replacing, or regenerating damaged tissues and organs. Rather than masking pain with medications, it uses natural or biologically-based treatments to promote healing and restore function.

At NeuPath, we offer advanced therapies designed to:

- Support your body's natural healing process
- Improve mobility and function
- Reduce pain from arthritis, injuries, or inflammation

Who Can Benefit?

These therapies may help if you suffer from:

- Osteoarthritis (knees, hips, shoulders, small joints)
- Tendinitis or ligament injuries
- Muscle or cartilage damage
- Chronic nerve pain
- Sports injuries or overuse syndromes

Not covered by OHIP. Private pay or may be covered by 3rd party insurance. Please check with your provider.

Treatment Options We Offer

Platelet-Rich Plasma (PRP)

- Uses your own blood's platelets and growth factors to stimulate tissue repair
- Effective for tendinitis, joint pain, osteoarthritis, and soft tissue injuries
- Gradual healing over several months; may require up to 3 treatments

Prolotherapy

- A dextrose (sugar) solution injected into ligaments/tendons to trigger the body's healing response
- Helps stabilize joints, relieve pain, and restore function
- Typically requires 3–6 treatments

Perineural Injection Therapy (PIT)

- A dextrose solution targets inflamed nerves to promote nerve healing and reduce pain
- Often used for chronic nerve pain and requires 3–6 treatments

What to Expect During the Procedure

- Quick, outpatient procedures performed by our experienced physicians
- Minimal downtime – most patients return to normal activities the same day
- Post-treatment soreness is common and usually resolves within days
- Your physician will discuss specific aftercare instructions, including avoiding anti-inflammatories to support natural healing
